IT FUNCTIONS AS A RECCONTION SIGNAL

CHYLOMICTON'S ADOLIC PROPORTEN BY THE CELLULAR BINDING AND INTERNALIZATION OF LDL PARTICLES BY THE CELLULAR BINDING AND INTERNALIZATION OF LDL PARTICLES BY THE CELLULAR BINDING AND INTERNALIZATION OF LDL PARTICLES BY THE CELLULAR BINDING AND INTERNALIZATION OF LDL PARTICLES BY APOLLEPPROPIEN B-100 (FDB). IT IS A DOMINANTLY INHERITED DISRABER OF LICEPARTICLES BY DEFECTIVE AND INTERNALIZATION AND INCREASED PRONENESS TO CORONARY ARTERY DISEASE (CAD).

THE PARÂMA CHOLESTERED LEVELS ARE DAMANICALLY BLEVANTED UNE TO INFRARED CLEARANCE OF LDL PARTICLES BY DEFECTIVE APOBLE RECEPTORS.

AB890626 AB990626 AB890626 AB890626 AB890626 AB990626 AB890626 AB9 Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia Cpneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia commoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as commonial infarction, cerebrovascular disease, carotid artery stenosis, composition, cerebrovascular disease, aortic aneurysm, calcular disease and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydia linfections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of Chlamydia pneumoniae proteins dispersent sequence represents a pneumoniae gene expression. The present sequence represents a composition of the invention composition of compositions of the probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a composition of the invention. Query Match Best Local S Matches 362 Sequence itch 100.0%; Score 1889; DB 23; Length 362; sal Similarity 100.0%; Pred. No. 8.6e-182; 362; Conservative 0; Mismatches 0; Indels 0; 362 AA; 0,

C. pneumoniae causes respiratory diseases such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent critis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae specially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses novel cells comprising a nucleic acid encoding CC a gene product having phenylalanine hydroxylase (PAH) activity such CC as phenylalanine hydroxylase (phhA). 4-carbinolamine debydratase (phhB) and aromatic aminotransferase (phhC), which are derived CC from a prokaryotic organism. The patent also relates to fusion proteins comprising a protein enhancing and/or stabilising the proteins comprising a protein enhancing and/or stabilising the PAH activity in addition to PAH activity. The cells are useful CC for preparing a protein derived from casein, globulin or a whey protein CC as a milk protein derived from casein, globulin or a whey protein CC as a milk protein derived from casein, globulin or a whey protein having reduced content of phenylalanine. The method involves contacting the food product starting material with the cells or fusion proteins CC such that at least part of the phenylalanine content of the starting material is converted into compounds that do not cause phenylated for methodic disorder resulting in an accumulation in the body of methodic disorder resulting in an accumulation in the body of function. The present sequence is a protein encoded by pFUSAB vector DNA insert sequence. This sequence comprises a lacz peptide from CC Escherichia coli, a linker peptide and phhA and phhB proteins.
                                                      Phenylalanine hydroxylase; PAH; phhA; 4a-carbinolamine dehydratase; ph aromatic aminotransferase; phhC; milk protein; animal protein; casein; proteinaceous food product; globulin; whey protein; phenylketonuria; PKU; inherited metabolic disorder; impaired brain function; nootropic; cell therapy; phhAB fusion protein.

The patent discloses novel cells comprising a nucleic acid encoding a gene product having phenylalanine hydroxylase (pAH) activity such as phenylalanine hydroxylase (phAH), 4a-carbinolanine dehydratase (phAH) and product having phenylalanine hydroxylase (phAH), 4a-carbinolanine dehydratase (phAH) and product and protein comprising a protein enhancing and/or stabilising the pAH activity in addition to pAH activity. The cells are useful for producing pAH. The sequences of the invention are also useful for producing a protein access food product (animal protein such as a milk protein derived from casein, globulin or a whey protein for a manufacturing material with the cells or fusion protein such hat at least part of the phenylalanine content of the starting material is converted into compounds that do not cause phenylatering material is converted into compounds that do not cause phenylatering material is converted into compounds that do not cause phenylatering material is converted into compounds that on the susful for manufacturing a medicament for treating PKU, which is an inherited metabolic disorder resulting in an accumulation in the body of Lybenylalanine and metaboliting in an accumulation protein fragment.

The polynecleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissum growth factor activity, immunomodilatory activity and activity, tissum growth factor activity, immunomodilatory activity and activity, tissum growth factor activity, immunomodilatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. Stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity. Infinity in activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neuronal tryptophane hydroxylase; nFPH; neuronal disease; primary haemostasis deficiency; allergy; transplantation; serotonin; antiarteriosclerosis; thrombolytic; anticoagulant; immunosuppressive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antiallergic; gynaecological.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Neurone specific tryptophane hydroxylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of influencing the level of serotonin, which involves the specific regularion of TPH (tryptophan hydroxylase) and/or neurona-specific TPH (nTPH) activity. The method is used for the diagnosis of neuronal diseases and for treating deficient primary haemostasis. Also reducing production of serotonin is used to treat arteriosclerosis and thrombosis, particularly where associated with diabetes mellitus, and to treat excessive (or normal but unwanted) immune system responses, e.g. allergy, (auto) immune diseases, risks associated with pregnancy, particularly pre-eclampsia, and transplant rejection. The present sequence is a neurone-specific TPH protein.
                                                                                                                                                                                                                                                                                                                                                          Sequence

```
This sequence represents rat tyrosine hydroxylase (TH) and may be used in the production of the varient TH molecules of the invention. These varients contain amino acid substitutions in the N-terminal portion of the molecule, and in the rat molecule these substitutions.

These varients contain amino acid substitutions in the N-terminal portion of the molecule, and in the rat molecule these substitutions.

Arg46. Varients containing one or more of these amino acid substitutions, have substantially enhanced enzymatic activity compared to the wild-type enzyme. The most pref. substitution being Ser40 for Tyr or Leu. DNA encoding the TH varients, and cells card for Tyr or Leu. DNA may be used for treating diseases associated with defective function of TH, or dopamine, eg. Parkinsons disease.

The implanted into the brain or encapsulated in a selectively permeable polymer capsule which allows release of the cells products but protects them from attack by the hosts antibodies or cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5

These sequences may be used in the construction of a varient tyrosine hydroxylase which contains at least one amino acid substitution in the N-terminal 55 amino acids. The substitution of cresponds to an amino acid selected from SerB, SerB, Arg37, Arg38, Gln39, Ser40, Leu42, 11e42, Glu43, Asg44, Ala45, Arg46 or Lys47. The enzymatic activity of the varient protein: as at least 3-fold greater than that for the wild type protein. Cells transfected with the DNA encoding these proteins may be used for treating neurological disorders associated with a deficiency in tyrosine hydroxylase or dopamine. These proteins may be used to generate antibodies specific for the varient tyrosine hydroxylases to monitor the enzyme during a treatment regimen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 233 WKEVYVTLKGLYATHACREHLEGFOLLERYCGYREDSIPOLEDVSRFLKERTGFOLRPVA 292

                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents human tyrosine hydroxylase (TH) and may be CC used in the production of the varient TH molecules of the invention. These varients contain amino acid substitutions in the N-terminal CC portion of the molecule, and in the human molecule these substitutions are pref. at positions Ser19, Ser31, Arg37, Arg38, Ser40, Leu41, Glu43, Asg94, Al445, Arg46 or Lya47. Varients CC substantially enhanced enzymatic activity compared to the wild-type CC enzyme. The most pref. substitutions being Ser40 for Tyr or Leu. DNA encoding the TH varients, and cells transformed with this DNA can be used for treating diseases associated with defective function CC of TH, or dopamine, eg. Parkinsons disease and Alzheimers disease, Cand effective disorders. The cells can then be implanted into the CC which allows release of the cells products but protects them from CC which allows release of the cells products but protects them from CC attack by the hosts antibodies or cells.

Genetically modified tyrosine hydroxylase having increased activity - used for treating neurological disorders e.g. Parkinson's and Alzheimer's diseases and affective disorder s e.g. disorders

Disclosure, Fig 6; 20pp; English.

tyrosine hydroxylase protien respectively. These sequences may be used in the construction of a varient tyrosine hydroxylase which contains at least one amino acid substitution in the N-terminal 55 amino acids. The substitution corresponds to an amino acid selected from Ser8 Ser31, Arg37, Arg37, The enzymatic activity of the varient proteins is at least 3-fold greater than that for the wild type protein. Cells transfected with the DNA encoding these proteins may be used for treating neurological disorders associated with a deficiency in tyrosine hydroxylase or dopamine. These proteins may be used to generate antibodies specific for the varient tyrosine hydroxylases to monitor the enzyme during a treatment regimen. The sequences given in AAR36740-41 represent the human and rat

Sequence 497 AA;

                                                                                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 œ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hybrid molecules are produced by covalently linking (1) a portion (A) of the binding domain of a cell-binding ligand, allowing binding of the mol. to an animal cell, translocate coll across the cell cytoplamic membrane, and and (3) a portion (B) of a translocation domain of a protein able to translocate (C) across the cell cytoplamic membrane, and and (3) a portion (C) which is to be introduced into the cell. (A) is derived from a steroid or polypeptide hormone, a single-chain analogue of a monoclonal antibody able to bind an antigen expressed on the cell surface, or a polypeptide toxin.
Hybrid, fusion, membrane translocation, binding region; HIV; infection; toxin; steroid; hormone; monoclonal antibody; antigen; diphtheria; exotoxin; phenylketonuria; cholera; interleukin; IL-2; protease; epidermal growth factor; ricin; tetanus; haxosaminidase; Shiga-like toxin A; SLT-A; PH; ligand; insulin; nuclease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hybrid molecules for targetting chemical entity to cell - have membrane trans-locating and cell binding-regions and used to treat HIV infection, genetic enzyme-deficiency disorders etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (A) may be derived from insulin, interleukins 2, 3 or 6 or

This protein comprises for human phenylalanine hydroxylase (PH). A DNA molecule (see AAT91638) encoding PH was used to construct a PH-diphtheria toxin B' gene that was expressed in E. coli. The resulting hybrid protein can be used in the treatment of phenylketonuria. The active PH enzyme is targeted to, and incorporated into, the broad range of cells which native diphtheria normally attacks, achieving the widespread therapy that is needed for this inherited disorder. Claimed hybrid proteins comprise a translocation domain and a cell binding domain. They can be used for the delivery of agents (e.g. therapeutic genes, toxins, detectable labels) into cells. The use of a translocation
                                                                                                                                                                                                                                                                                                                                                                           New hybrid molecules for delivery of agents to cells - comprise a binding domain of a cell binding ligand and a portion of a translocation domain of a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Phenylalanine hydroxylase; human; hybrid protein; cell delivery; cell binding ligand; translocation domain; diphtheria toxin B';
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human phenylalanine
                                                                                                                                                                                                                                                                                                                             Example 5; Fig 13A-C; 30pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mechanism ensures that the hybrid will be effective in relatively low doses, since a high proportion of the substance of interest will be taken into the targeted cells. The hybrid molecules can manufactured as a single hybrid recombinant protein, permitting reproducibility, consistency, and the precise control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            shiga-like toxin; p

SERAGEN

07-JUN-1984;

16-SEP-1997 US5668255-A. Homo sapiens phenylketonuria;

The invention relates to a recombinant DNA molecule encoding a hybrid protein comprising three parts: (a) the first part comprises a portion of a ranalocation domain of a naturally cocurring protein of the binding domain of a naturally cocurring protein of a ranalocation domain of a naturally cocurring protein of a portion of a translocation domain of a naturally cocurring protein correct from diphtheria toxin, botulinum neurotoxin, ricin, cholera toxin, which translocate the third part of the across the cytoplasmic committee from diphtheria toxin, shiga-like toxin, pertussis toxin and tetanus toxin, which translocate the third part of the across the cytoplasmic membrane into the cytosol of the cell; and (c) the third part comprises a polypeptide entity to be introduced into the cell, which is non-native to the naturally occurring protein of (b). This sequence represents the invention. The hybrid molecule enables the direction of appropriate invention. The hybrid molecule enables the direction of appropriate invention. The hybrid molecule enables the direction of appropriate alleviate or cure the disease. The hybrid is especially used in treating energing the missing function, to supplying the missing function, to supplying the missing function, to supplying cellular levels of a particular enayme or a scarce precursor or cofector, to directing or appropriate and proteins such as adipocytes, cancer cell, or virus infected-cells), to counteracting viral infections such as lively by introducing appropriate antibodies to viral proteins. It is also involved in the process of getting non-therapeutic substances such as detectable labels into cells.

New two-part hybrid protein comprising a translocation domain and a cell-binding domain, for treating genetic deficiency diseases, cancer and HIV infections -85US-0742554. 89US-0456095. 90US-0538276. 93US-0102387. WPI; 2000-160390/14. (SERA-) SERAGEN INC N-PSDB; AAZ90020. 22-DEC-1989; 14-JUN-1990; 04-AUG-1993; Murphy JR; 

This sequence represents the phenylalanine hydroxylase protein sequence.

The encoded protein can be included in the hybrid protein of the included in the hybrid protein of the cinvention and used to destroy or modify the cell that the hybrid protein comprises a first part which is a portion of the binding domain of a cell-binding ligand, effective to cause the hybrid molecule to bind to a cell-binding ligand, effective to partion of a translocation domain of a naturally cocurring protein (e.g. the translocation domain of diphtheria toxin) the second part translocates the third part comprises a chemical of second part translocates the third part comprises a chemical of and into the cytosol of the cell. The third part comprises a chemical entity to be introduced into the cell. The third part comprises a chemical entity to be introduced into the second and third part is non-native with respect to naturally occurring protein, and the phenylalanine hydroxylase protein can form part of the third portion of the translocation domain transfers the hybrid molecule across the cell and the translocation domain transfers the hybrid molecule across the cell consistence of diseases by delivering to affected cells an enzyme supplying the missing function. The hybrid molecules are useful for treating genetic deficiency diseases by delivering to affected cells an enzyme supplying the missing function, to supplement cellular levels of a particular enzyme cells of cuttorion, completed cells infections or other poisons to destroy particular cells (autorion) cancer cells or cells infected cells), and to counteract voiral infections such as HIV by introducing into appropriate cells antibodies to viral proteins. Example 5; Fig 13; 32pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is Cod-5 from Caenorhabditis elegans. Cod-5 is the aromatic amino acid hydroxylase that synthesises serotonin from CC precursor L tryptophan. The cod-5 gene was knocked out to produce mutants completely lacking in serotonin. These mutants were found to have defects CC in metabolic control. A number of C. elegans proteins that have mammalian homologues acting in the insulin signalling pathway were also contentified. The C. elegans age-1 gene encodes a homologue of the mammalian protein the C. elegans age-1 gene encodes a homologue of the mammalian receptor. The C. elegans AKT kinase and PKB kinase act downstream CC insulin receptor. The C. elegans AKT kinase and PKB kinase act downstream CC insulin signalling. The C. elegans PTEN lipid phosphatase homologue, CC DAF-18, has been found to act upstream of AKT in the pathway. This conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to send the secondary and disherers.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the mucleic acids encoding the polypeptides and cells genetically cendineered to express them are also useful for producing the proteins. They may be used to the proteins are useful in genetic vaccination, testing and concerned to express them are also useful for producing the proteins. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; to restance the cell proliferation; to regulate haematopoiesis; and in treatment of leukaemias. Adu29510-Adu33304 represent the amino acid concerned to fleukaemias. Adu29510-Adu33304 represent the amino acid concerned to the protein and/or stimular expresent the amino acid concerned to the protein and/or stimular expresent the amino acid concerned to the protein and protein accerned proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopotesis; nerve tissue regeneration; immune suppression; immune stimulation; anti-inflammatory; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG151), expressed DNA sequences (ABLIG176-ABLIG151), and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             멍
                                                                                                                                                                                                                             The invention relates to novel human secreted polypeptides. The copyreptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the mucleic acids encoding the polypeptide. Vectors comprising the proteins are useful in genetic vaccination, testing and therapy, and can be used as mutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; to dimune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. Adu29510-Adu33304 represent the amino acid or sequences of novel human secreted proteins of the invention.
                                                                                                                                     Query Match

                                                                                The patent discloses novel cells comprising a nucleic acid encoding cas gene product having phenylalanine hydroxylase (phA) activity such cas phenylalanine hydroxylase (phA), 4a-carbinolamine dehydratase (phB) and aromatic aminotransferase (phC), which are derived from a prokaryotic organism. The patent also relates to fusion proteins comprising a protein enhancing and/or stabilising the patent also repaired as a protein addition to PAH activity. The cells are useful for producing PAH. The sequences of the invention are also useful for producing PAH active food product (animal protein such having reduced content of phenylalanine. The method involves contacting the food product starting material with the cells or fusion proteins cuch that at least part of the phenylalanine content of the starting material with the cells or fusion proteins cuch that at least part of the phenylalanine content of the starting material that do not cause phenylketonuria (PKU) by the enzymatically active product. PAH enzyme is useful for menufacturing a medicament for treating PAH enzyme is useful for methodic disorder resulting in an accumulation in the body of L-phenylalanine and metabolites that can cause impaired brain function. The present sequence is a peptide sequence of phhAB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel recombinant cells comprising a nucleic acid encoding a gene product having phenylalanine hydroxylase activity, that is derived a prokaryotic organism, is useful for treating phenylketonuria in

                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-1149] (see Table 1) in the specification). ABN15762 to ABN127525 encode the human ORFX proteins are useful for proteins given in ABP01010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated of Carocar in humans, and in the manufacture of a medicament for treating a syndrome associated with an ORFX-associated disorder. ORFX polymorleotide syndrome associated with DRFX-associated disorder. ORFX polymorleotide syndrome associated with ORFX-associated disorders, cirhosis of liver, psoriasis, benign tumours. Keloid, degenerative disorders, cirhosis of liver, psoriasis, benign tumours. Keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disorders infectious diseases, autoimmune disorders such as multiple solestosis, interaction architis, autoimmune disorders such as multiple solesois, interaction architis, autoimmune disorders such as multiple solesois, interaction cardiovascular disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regenerative made treatment of lung or liver fibrosis, cepture protection or regenerative disorders, or periodontal disease, and for gut protection or regenerative disorders and conditions resulting from systemic requiring from a systemic for treating or and conditions resulting from systemic provisions.
                                                                                                                                                                                                                                                     hyperproliferative disorder, psoriasis; benign tumour; haemorrhage, degenerative disorder, osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders
                                                                                                                                                                                                                           Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis;
                                                                                                                                                                       Human ORFX protein sequence SEQ ID NO:12318.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID 12318; 1037pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5.7%; Score 108.5; DB 22; Length 1501;

                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DAN sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1083
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1041
   Sequence
                                                         sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 23847; 21pp + Sequence Listing; English

The invention relates to improving the production of a secondary metabolite by a fungus. This involves modulating the expression of at least one ZBC (zinc binuclear cluster protein) gene in a manner to improve the yield of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite e.g. antibacterial (such as beta-lactam), an anti-hypercholesterolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A), an ergot alkaloid (such as ergotamine), an anglogenesis inhibitor (such

as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, a fuggal toxin, a modulator of cell surface receptor signalling; a plant growth regulator, a pigment, an insecticide, or an antineoplastic compound. The method results in a decrease in fermentor run-time, a decrease in the size of the fermentor required for the production of equivalent amounts of the secondary metabolite, or a decrease in the biomass required for the production, which translates into decrease in the records ABP35575-ABP3722 represent ZBC processing. The sequences given in records ABP3575-ABP3722 represent ZBC proceins.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained directly from WIPO at

Comprises: (a) an oligo-dT primer sers for synchesising below comprises: (a) an oligo-dT primer sers of comprises: (a) an oligo-dT primer and an oligonucleotide complementary cromprises: (a) an oligo-dT primer and an oligonucleotide complementary for to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence which comprises a 3'-end sequence; where the polynucleotide comprises a 3'-end sequence; where the complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence; a settle data those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length of the primers allow obtaining of the full-length cDNAs represent human cDNA sequences; AAB92446 to AAH13632 AAH18633 to AAH18633 to PAH13632 and AAB95893 respensent human amino acid sequences; and AAH13629 to AAH13632 of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20;

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                           The present sequence represents a p102 protein. This protein is present CC the secretion associated 175 (SA-175) complex. Bight proteins form the CSA-175 complex, which binds a syntaxin-containing (SC) complex. The CSA-175 polypeptides and nucleotide sequences encoding them can be used CC for screening for compounds which modulate vesicular release involved in CC enhance binding between the SA-175 and SC complexes may be used to treat CC an affective disorder such as depression, manic-depressive disorders and CC disease or Huntington's disease. Compounds which inhibit binding between the SA-175 and SC complexes may be used to treat CC disease or Huntington's disease. Compounds which inhibit binding between the SA-175 and SC complexes may be used to treat a disorder of thought, CC such as schizophrenia, or for anaesthesia. The compounds can also be used to inhervent in the endocrine system for treatment of hormonal CC imbalances, the immune system for intervention in antigen processing, as erereted immunomodulators, and virial processing, as well as selficking CC during rapid cell division.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        p102 protein; secretion associated 17S complex; SA-17S; syntaxin-containing complex; SC complex; screening; modulate; syntaxin-containing complex; SC complex; secretory process; vesicular release; synaptic transmission; secretory process; treatment; affective disorder; depression; manic-depressive disorder; anxiety disorder; neurodegenerative disease; schizophrenia; anaesthesia;
